Dear Hiring Manager,

I am writing to apply for the Staff AI Security Engineer role on your detection team. Over the past six years I have moved from applied machine learning into security engineering and, most recently, detection engineering for production ML systems — a path that gives me both a builder's instincts and an operator's sense of what actually holds up in production.

At Cyberdyne Systems I built an adversarial-example detector that cut false negatives by 40% and now runs in front of every inference request our platform serves. At Skynet Analytics I caught two supply-chain compromises in third-party model artifacts before they reached production. In both roles I led the red-team exercises that found the gaps our defenses were built to close.

Your team's recent work on prompt-injection detection is exactly the kind of problem I have spent the last two years working on, and I would welcome the chance to bring that experience to your organization.

Thank you for your consideration.

Best regards,

Sarah Connor
